

Maryland Department of Health (MDH) Laboratories Administration

CERTIFICATION OF HAZMAT INSPECTION

To protect our employees from unknown hazardous components (i.e., explosives, radiation, chemicals) which may be contained in unopened packages and letters, the Laboratories Administration requires that the submitting organization certify that submitted unopened samples have undergone basic field safety screening to rule out the presence of explosives, radiation, flammability, corrosives, and volatile organic compounds prior to delivery to the Laboratories Administration.

The accompanying specimen(s)/sample(s):

BT ___ - ___ through BT ___ - ___ or

MBBT ___ - ___ through MBBT ___ - ___

have been screened and determined to be **NEGATIVE** for the presence of explosives, radiation, flammability, corrosives, and volatile organic compounds.
