REVISION RECORD

Revision	Date	Changes	Made By	Effective Date
9.3	11/15/2012	Global review and revision record implemented. Previous document 9.2	DEC & DEM Division Chiefs	11/15/2012
9.4	09/11/2013	Revised Org Chart of Microbiology; revised preservatives in tables on pp. 19 and 21	J. Razeq & P. Kassim	10/01/2013
9.5	01/25/2016	Updated contact information Administration Relocation	P. Kassim M. Saunders	04/01/2016
9.6	07/13/2017	Changed the title of the State and division. Updated chemistry and microbiology collection and preservation requirements. Update organizational charts.	M. Saunders	1/4/2018
9.7	06/26/2019	Updated organization chart, contact information and microbiology methods.	M. Molloy	07/01/2019
9.8	05/2023	Updated organization chart, contact information and methods	C. Stevenson	05/19/2023
10	10/10/2025	Updated organization chart, contact information and methods.	M. Habeeb	02/01/2026

PREFACE

The Laboratories Administration's mission is to promote, protect, and preserve the health and well-being of the people in Maryland by testing a wide variety of environmental samples and clinical specimens in cooperation with both public and private agencies at the local, state, and federal levels. This mission shall be accomplished with maximum public benefit at a minimum cost to the people of Maryland.

This Enviroguide enables this mission by listing both general sampling procedures and laboratory services available to local, county, and state public health and environmental officers and departments that are responsible for enforcement of regulations and standards and for ongoing surveillance of the environment and the food supply. The integrity of the sample and the quality of laboratory test data are significantly enhanced if one follows the instructions in the Enviroguide on sample requirements, preservation, and transport.

If you should have any suggestions to improve the usefulness of this Enviroguide, they will be gratefully received.

Robert A. Myers, Ph.D.
Director
Laboratories Administration

2.0 MISSION STATEMENT

The mission of the Division of Environmental Sciences is to provide a wide array of chemical and microbiological testing and technical services in support of programs and policies essential to the environmental quality and public health of the citizens of the State of Maryland.

3.0 INTRODUCTION

The purpose of this guide is to familiarize users with the analytical capabilities of the Division of Environmental Sciences, and to facilitate the effective use of these services.

The *Enviroguide* is organized into three parts: **Part I** describes Environmental Chemistry; **Part II** describes Environmental Microbiology, and **Part III** shows the Tests Directory of both sections. Parts I and II give a brief description of each area and their respective laboratories, including tables of all the tests performed by each section. These tables provide information on the required containers, sample size/volume, preservation techniques, holding time, and prescribed analytical method for each test. Part III, Test Directory, contains the list of tests and the name of the laboratory that performs that test. If specific analyses are requested, the appropriate laboratories should be consulted in advance.

Phone numbers for all areas in the Division are included on the *Contact* pages. Users of the services are strongly encouraged to call the appropriate testing area for any additional information, and to visit the Laboratories Administration's web site in order to obtain detailed and timely information: <https://health.maryland.gov/laboratories/Pages/home.aspx>

Finally, users are encouraged to consult this guide to help in planning prior to sampling. The proper collection, handling, and preservation of samples are critical to producing accurate and defensible data.

4.0 SAMPLING GUIDELINES

4.1 General Procedures

The Laboratories Administration analyzes samples to protect the environment and human health. It is therefore of great importance that all samples/specimens submitted for laboratory analysis are collected and preserved according to prescribed procedures. Failure to do so may result in rejection of the samples or in the invalidation of the test data. For information on established and prescribed procedures for collecting, preserving and transporting samples, consult the part of the *Enviroguide* that describes the particular test of interest. Field personnel are responsible for providing and preparing the appropriate sample containers, preservatives, and laboratory pure water for field and trip blanks for samples. Field personnel should not hesitate to consult the appropriate laboratories for information on sampling procedures for routine or non-routine analysis.

Information on each submitted sample should be entered directly into the LWP portal <https://prod.labwebportal.com/mdlabs/#/auth/login> (preferable) along with an environmental samples packing slip generated from the portal or accompanied by a Laboratory Analysis Request Form with the following information completely filled out:

- Collector's name and phone number
- Source and location of sampling
- Bottle / Container number / sample ID #
- Date and time of collection
- Type of preservation used
- Test(s) required
- Description of sample, if applicable
- Other pertinent sample / specimen information
- Where test results should be sent

To gain access to LWP, please complete and submit the Data User Agreement (page 6) to the relevant Section Supervisor. If your Entity (Submitting Facility) is not authorized to submit samples an Entity User agreement must also be completed. (Page 7)

4.2 Chain-of-Custody Samples

There are instances when the results of an analysis may be used in regulatory action and/or criminal/civil litigation. In such cases, the samples are considered physical evidence and special procedures must be strictly followed:

- The sample must be legally obtained.
- There must be a full description of how the sample was collected.
- A complete identification must be placed on the sample container and any shipping containers.
- Each sample must be securely sealed to prevent leakage, spills, or co-mingling of individual items.
- A Chain-of-Custody Record Form must accompany each sample or a batch of samples. The document will contain the name and signatures of all individuals handling the samples and the dates and time the samples were in their custody. Use the Division of Environmental Sciences' Chain-of-Custody Record Form for environmental chemistry samples and the Laboratories Administration's Chain-of-Custody Form for microbiology samples.
- When the samples are not under the direct control of any individual, they must be placed in a secure area.

Data User Agreement—Individual User
MDH Laboratories Administration

This data user agreement (Agreement) must be signed and submitted to the State of Maryland MDH-Laboratories Administration's Office of Information Management Services (OIMS) before a user ID and password are provided to a designated individual within an authorized entity for Lab Web Portal®/STARLIMS® system access. An entity whose representative has signed this Agreement shall ensure that the entity's designated Lab Web Portal®/STARLIMS® system user identified below will adhere to all pertinent Maryland and federal law including the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act requirements, and the terms set forth in this Agreement.

The entity named below and all its designated users understand and agree that:

- 1) Use of the Lab Web Portal®/STARLIMS® system is limited to entities that are authorized covered health care providers that use the data from the Laboratories Administration for treatment purposes;
- 2) Lab Web Portal®/STARLIMS® system access and use is restricted to users designated by the entity authorized by the State of Maryland MDH-Laboratories Administration in this Agreement;
- 3) By signing onto and using the Lab Web Portal®/STARLIMS® system, a designated user expressly consents to the:
 - a) Monitoring of all system activities; and
 - b) Safeguarding of individual protected health information as required by Maryland law, HIPAA and the HITECH Act;
- 4) Unauthorized access or use of this system is prohibited and could be subject to both federal and State criminal and/or civil penalties;
- 5) All data including records, reports, e-mail, software, and other data generated by or residing within this system are the property of the State of Maryland and may only be used as authorized and directed by the State of Maryland MDH-Laboratories Administration or as permitted and required by law;
- 6) The authorized entity and each designated user will safeguard and protect the assigned user ID and password used to access the Lab Web Portal®/STARLIMS® system from misuse by unauthorized persons;
- 7) An entity and each designated Lab Web Portal®/STARLIMS® system user will report to the OIMS any:
 - a) Misuse of the Lab Web Portal®/STARLIMS® system; and
 - b) Breach in confidentiality associated with use of the Lab Web Portal®/STARLIMS® system;
- 8) A personal computer used to access the Lab Web Portal®/STARLIMS® system (e.g., for look-up or review of an individual's protected health information) is:
 - a) Situated in a location away from public areas; and
 - b) Positioned in a way that prevents viewing by unauthorized individuals; and
- 9) OIMS will unilaterally and automatically lock-out a designated user that:
 - a) Is found misusing the Lab Web Portal®/STARLIMS® system; or
 - b) Fails to report any:
 - i) Misuse of the Lab Web Portal®/STARLIMS® system; or
 - ii) Breach in confidentiality associated with use of the Lab Web Portal®/STARLIMS® system.

Name of Authorized Entity (Submitter Name & Submitter ID):

I affirm that I have the supervisory authority to designate the undersigned individual as a Lab Web Portal®/STARLIMS® System User:

Name of User's Supervisor (printed)

Title

Supervisor's Signature

Date

I affirm that as a Lab Web Portal®/STARLIMS® System User I agree to comply with the terms of this agreement:

Data User Agreement —Entity Users
MDH Laboratories Administration

This data user agreement (Agreement) must be signed and submitted to the State of Maryland MDH-Laboratories Administration's Office of Information Management Services (OIMS) before a user ID and password are provided to an entity for Lab Web Portal®/STARLIMS® system access. An entity whose representative has signed this Agreement ensures that the entity's designated Lab Web Portal®/STARLIMS® system users will adhere to all pertinent Maryland and federal law including the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act requirements, and the terms set forth in this Agreement.

The entity named below and all its designated users understand and agree that:

- 1) Use of the Lab Web Portal®/STARLIMS® system is limited to entities that are authorized covered health care providers that use the data from the Laboratories Administration for treatment purposes;
- 2) Lab Web Portal®/STARLIMS® system access and use is restricted to users designated by the entity authorized by the State of Maryland MDH-Laboratories Administration in this Agreement;
- 3) By signing onto and using the Lab Web Portal®/STARLIMS® system, a designated user expressly consents to the:
 - a) Monitoring of all system activities; and
 - b) Safeguarding of individual protected health information as required by Maryland law, HIPAA and the HITECH Act;
- 4) Unauthorized access or use of this system is prohibited and could be subject to both federal and State criminal and/or civil penalties;
- 5) All data including records, reports, e-mail, software, and other data generated by or residing within this system are the property of the State of Maryland and may only be used as authorized and directed by the State of Maryland MDH-Laboratories Administration or as permitted and required by law;
- 6) The authorized entity and each designated user will safeguard and protect the assigned user ID and password used to access the Lab Web Portal®/STARLIMS® system from misuse by unauthorized persons;
- 7) An entity and its designated Lab Web Portal®/STARLIMS® system users will report to the OIMS any:
 - a) Misuse of the Lab Web Portal®/STARLIMS® system; and
 - b) Breach in confidentiality associated with use of the Lab Web Portal®/STARLIMS® system;
- 8) A personal computer used to access the Lab Web Portal®/STARLIMS® system (e.g., for look-up or review of an individual's protected health information) is:
 - a) Situated in a location away from public areas; and
 - b) Positioned in a way that prevents viewing by unauthorized individuals; and
- 9) OIMS will unilaterally and automatically lock-out an authorized entity when a designated user:
 - a) Is found misusing the Lab Web Portal®/STARLIMS® system; or
 - b) Fails to report any:
 - i) Misuse of the Lab Web Portal®/STARLIMS® system; or
 - ii) Breach in confidentiality associated with use of the Lab Web Portal®/STARLIMS® system.
- 10) The authorized entity shall manage the designated user logins, and notify the State of Maryland MDH-Laboratories Administration when to remove access to the system when the employment status of a user changes, e.g., termination of employment, transfer, etc.

By signing this Agreement, I affirm that I have the authority to obligate the named authorized entity and its designated users of the Lab Web Portal®/STARLIMS® system to the terms of this agreement:

Name of Authorized Entity (Submitter Name & Submitter ID):

Name of Representative (printed)

5.0 PART I: ENVIRONMENTAL SCIENCES CHEMISTRY

5.1 Program Services

The Division of Environmental Sciences - Chemistry program provides analytical data for environmental, human, and food product samples that are comprised of matrices such as drinking water, wastewater, sediments, soils, sludge, indoor air from worksites, ambient air, aquatic tissues, foods, dairy products, and human blood and urine. Tests are performed for trace metals, non-metallic inorganic compounds, Per- and Polyfluoroalkyl Substances (PFAS), volatile and semi-volatile organic compounds, asbestos, PCBs, pesticides, toxic industrial chemicals, radionuclides, toxins/poisons, chemotherapeutic agents, and metabolites of chemical warfare agents. The laboratories serve as a resource for the Maryland Departments of the Environment (MDE), Health (MDH), Agriculture (MDA), and Natural Resources (DNR), counties and Local Health departments, MDH-Division of Milk Control, MDH-Office of Food Protection, Maryland Poison Center, and federal partners including the Food and Drug Administration (FDA), Centers for Disease Control and Prevention (CDC), and Environmental Protection Agency (EPA).

5.1.1 *Operational Format* – page 9

5.1.2 *Accreditation / Certification*

The professional staff possesses a broad range of knowledge and experience in the performance of environmental chemical analyses in a variety of matrices. The laboratories involved in the analysis of drinking water are certified by the US-EPA for disinfection byproducts, volatile organic contaminants, synthetic organic contaminants, pesticides, metals, inorganic contaminants and radioactive contaminants. The Air Quality Laboratory is certified for particulate matter in ambient air and maintains NVLAP accreditation for the analysis of bulk asbestos in building materials. The Chemical Emergency Preparedness & Response Section is also accredited by CLIA for the analysis of toxic metals, cyanide, volatile organic compounds, and metabolites of selected chemical warfare agents in human urine and blood. The Division is also ISO/IEC 17025:2017 accredited through A2LA (American Association for Laboratory Accreditation). Certificates (Biological: 3525.01, Chemical: 3525.02) and a complete list of the methods on our scope of accreditation is located on the MDH-Laboratories Administration website.

5.1.3 *Quality Assurance Program*

The Quality Assurance Program manages, coordinates, and monitors the division's quality assurance/quality control activities and laboratory safety protocols; serves as a liaison between federal and state regulatory agencies and the laboratory staff for advice on technical and QA/QC issues; promotes bi-directional communication with analysts and management; develops and implements data quality objectives, tracks the status of the various projects; and evaluates the overall analytical performance of the laboratory.

5.1.4 *Sample Management*

The Sample Management ensures all samples received have been collected, preserved, and transported as specified by standard procedures and regulations. It

handles sample log-in and registration, chain-of-custody documentation, storage and distribution to the respective laboratories for chemical analysis.

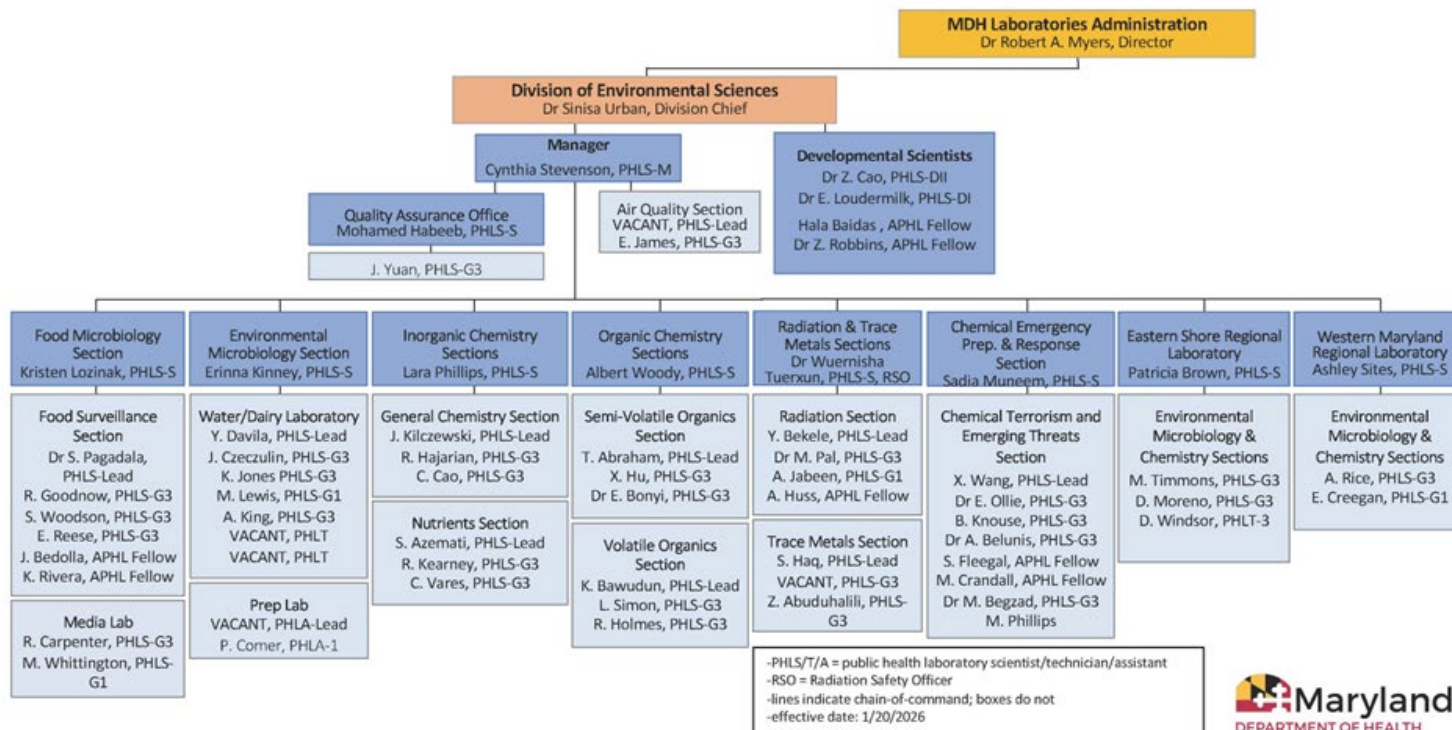

The normal turnaround time for sample analysis is 2 - 10 working days from receipt of the samples. Turnaround times, however, may vary depending on the type of test(s) requested, number of samples, and the regulatory criteria. In emergencies, rush/priority sample analysis can be performed upon client request with the consent of the Division Chief, Manager, and/or the appropriate Laboratory Supervisor.

All sampling must be consistently performed using accepted methodologies. Analysis of samples must be performed within a specific time frame after sampling and preservation in order to minimize the effect of biological or chemical processes on sample quality. This is to ensure that the analytical results are representative of the actual concentration of a contaminant at the time of sampling. Regulatory agencies such as the US-EPA/CLIA have specified holding times allowed for each sample type and corresponding analytical parameters. See chart under each section.

The Laboratories Administration has a contracted courier service available to pick up samples from designated local environmental health departments throughout the State. The courier/submitters deliver the samples to the Laboratories Administration Sample Receiving Area (Room 129) located on the First Floor at 1770 Ashland Avenue, Baltimore, MD 21205 between the hours of 8:00 a.m. to 6:00 p.m., Mondays through Fridays. Upon arrival at the loading dock, courier/submitters sign in the "Courier Sign-in Sheet". Samples received during the working hours are transported to the sample accessioning area in Room 139 by one of the sample receiving area staff member. (Chain of Custody samples are delivered directly to the laboratory testing personnel following the COC protocol). The laboratory testing staff then receives/logs in the samples into StarLIMS. For samples delivered after working hours, the sample receiving area staff member receives the samples from the first-floor loading dock (Room 129) and delivers the coolers to the walk-in refrigerator in Room 143. Each morning laboratory testing personnel checks walk-in refrigerator in Room 143 for the coolers received after hours and transport them to Accessioning Lab located in Room 139 to receive the samples in Starlims for processing. All empty coolers are returned to the Empty Cooler Pick-up Room 141.

Samplers are requested to follow the information regarding collection, preservation, and holding times for the samples being collected. This information is summarized under each laboratory.

OPERATIONAL FORMAT

5.2 ANALYTICAL SERVICES

5.2.1 Air Quality Section

The AIR QUALITY SECTION provides analytical and technical services in the evaluation of air quality in Maryland. This section performs the measurement of respirable dust on micro filters and the analysis of bulk asbestos in building materials and airborne particulates. *Test Chart on page 15*

5.2.2 Chemical Emergency Preparedness & Response Section

The CHEMICAL EMERGENCY PREPAREDNESS & RESPONSE SECTION (CEPR) supports the State of Maryland's Chemical Terrorism Preparedness program by maintaining a state of readiness to respond immediately to a chemical terrorism incident. This Section has also been part of the Laboratory Response Network – Chemical threat (LRN-C) program of the CDC and DHS since its inception in 1999. It also supports the State's efforts to monitor the exposure of the citizens to certain toxic environmental contaminants in their communities. This Section analyzes human urine and serum/blood specimens from people potentially exposed to different classes of toxic environmental/industrial compounds like PFAS and chemical warfare agents. *Refer to Test Chart on page 17.*

5.2.3 Emerging Contaminants Section

The EMERGING CONTAMINANTS SECTION tests environmental samples including drinking, surface, ground, and waste waters, sediments, soils, landfill leachates, biosolids and fish, crab, and clam tissue for up to 40 different PFAS using EPA Methods 537.1, 533, and 1633 at parts-per-trillion (ppt) sensitivity. The Section also uses high-resolution mass spectrometry to identify novel PFAS and other Contaminants of Emerging Concern (CECs). *Test Chart on page 16.*

5.2.4 Food Chemistry Section

The FOOD CHEMISTRY SECTION analyzes food for compliance, surveillance, and evidence of adulteration. The Section works closely with FDA as a national food surveillance testing hub. The main focus of surveillance includes toxic metals (lead, mercury, cadmium, arsenic, and thallium), PFAS and the mycotoxin patulin. Analysis of samples is performed mainly using automated microwave digestion, inductively coupled plasma mass spectrometry, liquid chromatography tandem mass spectrometry, high-resolution mass spectrometry. *Test Chart on page 18.*

5.2.5 General Chemistry Section

The GENERAL CHEMISTRY SECTION provides analytical and technical services in the testing of samples for physical and aggregate properties, non-metallic inorganic compounds and organic aggregate constituents to help determine

the suitability of drinking water for human consumption, effectiveness of wastewater treatment systems, and the quality of the Chesapeake Bay and its tributary waters. It also analyzes samples suspected of having toxic or hazardous effects. The testing is performed using a variety of wet chemistry instrumentations.

This section also measures the chlorophyll content of water collected from the Chesapeake Bay and its tributaries. The chlorophyll content of water is an important indication of the activity of algae and other organisms whose growth has harmful effects on water and wildlife. *Test Chart on page 19.*

5.2.6 Trace Metals Section

The TRACE METALS SECTION performs the analyses of trace metals in drinking water, wastewater, groundwater, aquatic tissues, hazardous wastes, soils, sediments, sludges, and leachates. Analysis of multi-media samples is carried out using inductively coupled plasma spectrometry (ICP), inductively coupled plasma-mass spectrometry (ICP-MS), and cold vapor atomic absorption spectrophotometry (CVAA). *Test Chart on page 20.*

5.2.7 Nutrients Section

The NUTRIENTS SECTION provides analytical and technical services to determine the suitability of drinking water for human consumption and/or effectiveness of wastewater treatment systems. Nitrogen and phosphorus testing help to determine the quality of the Bay waters and support the evaluation of the effectiveness of the nutrient reduction strategies used in the Chesapeake Bay recovery efforts. The testing is performed using spectrophotometers and automated flow injection analyzers (FIA). *Test Chart on page 21.*

5.2.8 Semi-Volatile Organics Section

The SEMI-VOLATILE ORGANICS SECTION performs the analyses of pesticides, herbicides, carbamates, semi-volatile organic compounds and polychlorinated biphenyls (PCBs) in drinking water, wastewater, groundwater, aquatic tissues, hazardous wastes, soils, sediments, sludges, leachates, and in consumer products for possible tampering or adulteration. The Section also tests hand sanitizer for efficacy and toxic alcohols.

Analysis of multi-media samples is carried out using capillary column gas chromatographs equipped with electron capture detectors (GC/ECD), flame-ionization detectors (GC/FID), or mass spectrometers (GC/MS), and high performance liquid chromatographs (HPLC) equipped with fluorescence detectors. *Test Chart on page 22.*

5.2.9 Radiation Section

The RADIATION SECTION performs the analysis of radionuclides in drinking water, raw water, wastewater, groundwater, aquatic tissues, soils, sediments, milk, wipes, beverages, juice, grains and vegetation. The section also tests for

radionuclides in foods for the FDA.

Analysis of samples is performed using gamma ray spectroscopy, alpha spectrometry, low background alpha / beta counting, and liquid scintillation spectrophotometry. *Test Chart on page 23.*

5.2.10 Volatile Organics Section

The VOLATILE ORGANICS SECTION performs the analyses of volatile and semi-volatile organic compounds in drinking water, wastewater, groundwater, hazardous wastes, soils, sediments, sludges, leachates, and in consumer products for possible tampering or adulteration. This laboratory also performs the analyses of disinfection by-products, testing of total trihalomethanes (THMs), and halo-acetic acids (HAA6) in drinking water.

Analysis of multi-media samples is carried out using purge and trap introductory systems attached to capillary column (GC/MS) mass spectrometers and gas chromatographs equipped with dual electron capture detectors (GC/ECD). Test Chart page 24.

6.0 PART II: ENVIRONMENTAL SCIENCES MICROBIOLOGY

6.1 PROGRAM SERVICES

The Division of Environmental Sciences Microbiology area analyzes samples originating from diverse environmental sources. At Central Laboratory, Microbiological testing is divided into two main sections – *Environmental Microbiology (Water/Dairy/ Shellfish), and Food Microbiology*.

The two Regional Laboratories - *Eastern Shore Regional Laboratory (ESRL)* and *Western Maryland Regional Laboratory (WMRL)* - all perform water microbiology analysis. The WMRL also analyzes dairy samples and the ESRL performs analysis of shellfish growing water samples.

6.1.1 *Organizational Chart* - see Page 8

6.1.2 *Quality Assurance*

Quality Assurance is a set of operating principles to ensure production of data of known and defensible quality. To accomplish these goals, each laboratory has a written Quality Control plan that outlines the procedures to be followed in sample collection, transport, and analysis. Corrective action procedures, which are a part of the Quality Assurance Plan, are instituted to address possible deviations.

6.1.3 *Sample Management*

At Central Laboratory, food and water samples should be delivered to the loading dock. Dairy product samples are to be transported to the Accessioning Lab, located in Room 139, for processing. For further information, contact the individual laboratory.

For sample management procedures at the regional laboratories, contact the specific laboratory.

- Eastern Shore (410)219-9005 / (410)749-1174
- Western Maryland (301)777-2115/ 2116

6.1.4 *Sampling Procedures*

For sample collection protocols please refer to the specific methods or contact the appropriate laboratory.

6.2 ANALYTICAL SERVICES

The Environmental Sciences Microbiology Program responds to client requests for laboratory support in the areas of environmental and consumer products compliance monitoring. The functions of the program are performed in three testing units at the Central Laboratory and integrated into the functions of two regional laboratories.

These functions summarize the mission of the Laboratories Administration: to provide accurate and reliable data that can be used to support the public health goals of the State's monitoring agencies.

6.2.1 *Environmental Microbiology (Water & Dairy)*

The ENVIRONMENTAL MICROBIOLOGY SECTION is focused on:

(1) Water Microbiology: analytical testing of public and private drinking waters, sewages, streams, dairy waters, and recreational waters that include natural bathing areas (beaches), swimming pools, and spas, for organisms indicative of fecal contamination and bacterial densities. This laboratory is certified by the U.S. Environmental Protection Agency (EPA) for the analysis of drinking waters.

(2) Shellfish Microbiology: analytical testing of shellfish suspected of being associated with potential foodborne illness. The Shellfish laboratory performs testing of shellfish growing waters and shellstock in support of the State's monitoring and enforcement activities.

(3) Dairy Section: analytical testing of a variety of dairy products to determine compliance with State and Federal laws and regulations. The Dairy laboratory performs microbiological tests such as HPC (total microbial counts), coliform counts, and listeria identification. Additional microbiological tests performed in this laboratory include inhibitor testing (antibiotic concentration) and somatic cell counts. The Dairy Section is also a regulatory laboratory that analyzes milk and milk products to ensure complete pasteurization and to monitor quality standard by physical and chemical methods. The testing is in accordance with Pasteurized Milk Ordinance (PMO) compiled by U.S. FDA Milk Program which the State of Maryland has adopted. This document provides for the safe handling of milk to prevent the transmission of disease and prevents the mislabeling and adulteration of milk products. This laboratory is certified by the U.S. Food and Drug Administration (FDA).

6.2.2 Food Microbiology Section

The FOOD MICROBIOLOGY SECTION analyzes food and environmental samples suspected of being associated with potential foodborne illness. The Section performs testing for outbreak investigations with State programs and FDA, and large-scale (>1,000 samples per year) surveillance testing for FDA. Pathogens analyzed within the Food Microbiology Section include Aerobic Plate Count, Total Coliforms, Fecal Coliforms, *Escherichia coli*, *Staphylococcus aureus*, *Salmonella*, *Listeria monocytogenes*, *Bacillus cereus*, *Escherichia coli* O157:H7 and non-O157 STEC, *Campylobacter spp*, *Cronobacter spp*, *Cyclospora cayetanesis*, *Clostridium perfringens*, *Staphylococcal enterotoxin*, and *Vibrio spp.*. The Food Microbiology Section is certified by the U.S. Food and Drug Administration (FDA). The Food Microbiology Section is accredited under ISO17025:2017 (A2LA Certificate 3525.01).

WATER AND WASTEWATER MICROBIOLOGY

Sample Test	Analytical Test	Sample Size	Sample Container Specifications	Turnaround Time	Transport Conditions	Holding Time
Wastewater effluents	Fecal coliforms	100 mL	Sterile 250 mL 8 oz. bottle containing 0.8 mL of a combination of sodium thiosulfate & EDTA	24 hrs	<p>Water Samples should be transported in coolers containing crushed ice filled no higher than the shoulders of the water containers in order to hold the temperature of the samples between 1.0 °C to 10 °C from the time of collection to the time of examination. Use of "Cool-Pack" alone without ice is not sufficient to maintain the required temperature.</p> <p>Water containers should be protected with barriers so as to be transported in upright positions and not be submerged in ice or slush.</p>	6 hrs.
Stream samples	Fecal coliforms; <i>Escherichia coli</i> ; Enterococci, Pseudomonas	100 mL	Sterile 150 mL 4 oz. bottle containing 0.1 mL of a 10% sodium thiosulfate solution.	24 hrs		6 hrs.
Swimming pool and/or man-made tanks	Total coliforms; <i>Escherichia coli</i> , Heterotrophic plate count (HPC), Simplate, Pseudomonas	150 mL		24-48 hrs		6 hrs.
Bathing beach areas, quarries and other natural bathing areas	Fecal coliforms; <i>Escherichia coli</i> ; Enterococci, Pseudomonas	100 mL		24 hrs		6 hrs.
Private & other public drinking waters	Total Coliforms & <i>Escherichia coli</i>	105 mL		24 hrs		30 hrs.
Public drinking water	Total coliforms; Heterotrophic plate count (HPC), Simplate	105 mL		48 hrs		30 hrs. 8 hrs. (HPC)
Potable and Non-Potable Water Systems	Legionella	1L	In sterile container	12 days		72 hrs (or Refrigeration)
Bottled water	Total & Fecal coliforms; <i>Escherichia coli</i> ; Standard plate count, Simplate, Pseudomonas,	100 mL	In original, unopened container	72 hrs	Un-iced.	N/A

FOOD MICROBIOLOGY

The condition of food and environmental samples received for examination at the lab is of primary importance. If the samples are not properly collected, are mishandled during transport to the lab, or are not representative of the sampled lot, then there is an increased likelihood that laboratory results will be meaningless. In general, for all food and environmental samples submitted to the Food Microbiology Laboratory, unless otherwise noted, the following may be assumed for all methods:

- If possible, collect and send food samples in the original packaging or container.
- For environmental swab or sponge collection, only use those swabs and sponges provided by the Food Microbiology Laboratory or the MDH Rapid Response Team (SMaRRT). Swabs are provided pre-moistened with D/E Neutralizing Broth or Lethen Broth.
- All food/environmental samples must be submitted under chain of custody (including chain of custody seals, tamper-proof tape, and appropriate paperwork) unless prior arrangements are made with the Food Microbiology Laboratory.
- Sterile/aseptic technique is required for handling/packaging of food/environmental samples.
- Food and environmental samples must be individually bagged in sterile, leak-proof containers. Do not use felt pen on plastic for identification markings because the ink might penetrate the container.
- Samples should be submitted microbiologically unchanged from the time of sampling. Refrigerated/perishable foods should be held under refrigeration immediately after collection and during transport. Frozen food samples should be maintained frozen after collection and during transport. Non-perishable/ambient foods may be kept at ambient temperatures during collection and during transport. Environmental swabs/sponges and ultrafilters must be kept refrigerated after collection and during transport. Water should be transported in coolers containing between 2.0 °C to 5 °C.
- Use insulated containers (Styrofoam ice chests, coolers) and prefrozen icepacks and/or Insul-Ice to maintain sample temperature. Fill dead space inside coolers so that food, environmental samples, and ultrafilters do not move during transport.
- Water samples should be transported in coolers containing crushed ice filled no higher than the shoulders of the water containers in order to hold the temperature of the samples between 2.0 °C to 5 °C.

METHOD	MATRIX	METHOD	SAMPLE SIZE	HOLDING TIME	TURNAROUND TIME*
Aerobic Plate Count	Food	BAM Chapter 3	Amount: <ul style="list-style-type: none"> Food: 100-200g (3.5– 7.05 oz); minimum of 50g. Must be in unopened or sterile container. <i>L.</i>	Food	AOAC OMA	Amount:	36 hours	5-10 days

METHOD	MATRIX	METHOD	SAMPLE SIZE	HOLDING TIME	TURNAROUND TIME*
<i>monocytogenes</i> (Detection)		2004.06 and AOAC 2004.02 OR AOAC OMA OR 2016.07 and AOAC OMA 2016.08 OR BAM Chapter 10 (matrix dependent)	<ul style="list-style-type: none"> Food: 200-400g (7.05 – 14.1 oz); minimum of 100g. Must be in unopened or sterile container. Samples less than 100g may be tested if necessary but results may not be representative of the sample 	(unless otherwise noted)	
	Environmental Swabs	AOAC OMA 2016.07 and AOAC OMA 2016.08	Amount: <ul style="list-style-type: none"> 1 sponge/swab per sample. Must be in unopened or sterile container. 	24 hours	5-10 days
<i>L. monocytogenes</i> (Enumeration)	Food	FDA BAM Chapter 10J	Amount: <ul style="list-style-type: none"> Food: 200-400g (7.05 – 14.1 oz); minimum of 100g. Must be in unopened or sterile container. Samples less than 100g may be tested if necessary but results may not be representative of the sample 	36 hours (unless otherwise noted)	5-10 days
<i>Salmonella</i> spp	Food	AOAC OMA OR 2004.03 OR AOAC OMA 2016.01 OR BAM Chapter 5 (matrix dependent)	Amount: <ul style="list-style-type: none"> Food: 100-200g (3.5– 7.05 oz); minimum of 50g. Must be in unopened or sterile container. Samples less than 50g may be tested if necessary but results may not be representative of the sample 	36 hours (unless otherwise noted)	5-10 days
	Environmental Swabs	AOAC OMA 2016.01	Amount: <ul style="list-style-type: none"> 1 sponge/swab per sample. Must be in sterile container. 	48 hours	5-10 days
	Agricultural Water	FDA CFSAN Salmonella DEUF Detection Protocol (version 1.3)	Amount: <ul style="list-style-type: none"> 1 ultrafilter per sample (filter 20 L of agricultural water per sample). Must be in sterile container. 	24 hours	5-10 days
	Water	SM9260B	Amount: <ul style="list-style-type: none"> 100 mL per sample. Must be in sterile container. Samples less than 100 mL may be tested if necessary but results may not be representative of the sample 	2-31 hours	5-10 days
Ricin	Food	FERN-MIC.0028.00	Amount: <ul style="list-style-type: none"> Food: 100-200g (3.5– 7.05 oz); minimum of 50g. Must be in unopened or sterile container. Samples less than 50g may be tested if necessary but results may not be representative of the sample 	36 hours (unless otherwise noted)	3-5 days
<i>Staphylococcus</i>	Food	BAM Chapter 12	Amount:	36 hours	5-10 days

METHOD	MATRIX	METHOD	SAMPLE SIZE	HOLDING TIME	TURNAROUND TIME*
<i>aureus</i>			<ul style="list-style-type: none"> <i>Food</i>: 100-200g (3.5– 7.05 oz); minimum of 50g. Must be in unopened or sterile container. Samples less than 50g may be tested if necessary but results may not be representative of the sample 	(unless otherwise noted)	
Staphylococcal Enterotoxin	Food	AOAC OMA 2007.06	Amount: <ul style="list-style-type: none"> <i>Food</i>: 100-200g (3.5– 7.05 oz); minimum of 50g. Must be in unopened or sterile container. Samples less than 50g may be tested if necessary but results may not be representative of the sample 	36 hours (unless otherwise noted)	3-5 days
<i>Yersinia pestis</i>	Food	FERN-MIC.0004.04	Amount: <ul style="list-style-type: none"> <i>Food</i>: 100-200g (3.5– 7.05 oz); minimum of 50g. Must be in unopened or sterile container. Samples less than 50g may be tested if necessary but results may not be representative of the sample 	36 hours (unless otherwise noted)	10-14 days
<i>Vibrio</i> spp	Food	BAM Chapter 9	Amount: <ul style="list-style-type: none"> <i>Food</i>: 200-400g (7.05 – 14.1 oz); minimum of 100g. Must be in unopened or sterile container. Samples less than 100g may be tested if necessary but results may not be representative of the sample <i>Shellfish</i>: <i>Shellfish</i>: 12-15 animals. Must be in sterile container Samples less than 12 animals may be tested if necessary but results may not be representative of the sample. 	36 hours (unless otherwise noted)	5-10 days

* Additional time may be required

DAIRY

Sample Type	Analytical Test	Sample Size	Sample Container Specifications	Turn around Time	Transport Conditions	Maximum Allowable Holding Time
Temperature Control		100 mL	Container similar to samples in size and product type.	none	Transport under same conditions as samples.	none
Raw milk	Petrifilm Aerobic Count, Inhibitory substances, DMSCC(as appropriate)	50 mL	Must be in sterile container, at least 50 mL volume	5 days	Transport in coolers containing crushed ice filled to the shoulder of container. Each cooler accompanied by a temperature control	48 hrs
Pasteurized milk and cream	Petrifilm Aerobic Count, Petrifilm Coliform Count, High Sensitivity Coliform Count, Inhibitory substances; Phosphatase	100 mL	Must be in a sterile, unopened, container with appropriate sample size.	5 days		60 hrs
Pasteurized flavored milk and cream	Petrifilm Aerobic Count, Petrifilm Coliform Count, High Sensitivity Coliform Count,	100 mL		5 days		60 hrs
Ultra-pasteurized products	Petrifilm Aerobic Count, Petrifilm Coliform Count, High Sensitivity Coliform Count, Inhibitory substances;	100 mL		5 days		60 hrs
Cultured products	Petrifilm Coliform Count, High Sensitivity Coliform	100 mL		5 days		60 hrs
Acidophilus milk	Petrifilm Coliform Count, High Sensitivity Coliform; Inhibitory substances;	100 mL	Must be in a sterile, unopened, container with appropriate sample size.	5 days	Must be transported in cooler containing crushed ice. Avoid complete submersion of container. Must be accompanied by temperature control.	60 hrs
Frozen desserts	Petrifilm Aerobic Count, High Sensitivity Coliform Count	100 g		5 days	Must be transported in cooler chest accompanied by dry ice. Temperature control not necessary.	60 hrs
Frozen dessert mixes or soft-serves	Petrifilm Aerobic Count, Petrifilm Coliform Count, High Sensitivity Coliform Count	100 g	Must be in a sterile, unopened, container with appropriate sample size.	5 days	Must be transported in coolers with crushed ice and accompanied by temperature control. May not be frozen.	60 hrs.
Powdered Milk	Petrifilm Aerobic Count, Petrifilm Coliform Count, High Sensitivity Coliform Count	100 g	Submitted in Division of Milk Control approved plastic bags.	5 days	Room temperature	60 hrs
Soft frozen desserts	Petrifilm Aerobic Count, Petrifilm Coliform Count, High Sensitivity Coliform Count Phosphates	100 mL/g	Original container or sterile container	5 days	Must be transported in cooler with crushed ice and accompanied by temperature control. May not be frozen	60 hrs
Empty containers	Residual bacterial count & residual coliform count	NA	NA	5 days	Room temperature.	48 hrs*

Under ideal conditions, analysis of the samples should begin within 24 hours and, in most cases, no later than 48 hours after original collection

7.0 PART III: TEST DIRECTORY

7.1 Abbreviations

<u>Laboratory/Section</u>	<u>Abbreviation</u>
AIR QUALITY SECTION	AQS
CHEMICAL EMERGENCY PREPAREDNESS & RESPONSE SECTION	CEPR

WATER MICROBIOLOGY SECTION	WM
PFAS AND CEC SECTION	PFAS

7.2 Index

A

Abrine
Acenaphthene
Acenaphthylene
Acetone
Alachlor
Aldrin
Alkalinity, total
Alpha, gross (air, wipes)
Alpha, gross (water, dissolved, suspended)
Alpha-BHC
Aluminium
Ammonia, nitrogen
Anthracene
Antibiotic residue tests (dairy)
Antimony
Arsenic
AsbesVOS (air, bulk)
Atrazine

B

Bacillus cereus (foods)
Bacteriological water suitability
Barium
Benzene
Beryllium
Benzo (a) anthracene
Benzo (a) pyrene
Benzo (b) fluoranthene
Benzo (k) fluoranthene
Benzo (g,h,i) perylene

Beta-BHC
Beta, gross (air, wipes)
Beta, gross (water dissolved, suspended)
Beverage
Biomonitoring (Human)
Biochemical oxygen demand (BOD)
Bis (2-chloroethyl) methane
Bis (2-chloroisopropyl) ether
Bis (2-ethylhexyl) adipate
Bis (2-ethylhexyl) phthalate
Bottled water
Botulism
Bromoacetic acid
Bromobenzene
Bromochloroacetic acid
Bromochloromethane
Bromodichloromethane
Bromoform
Bromomethane
