

The COVID-19 Triple Play:

Three Keys to COVID Mitigation in Primary Care

There are many strategies and a lot of information out there related to COVID-19. As we continue to face the Omicron surge, focus on three essential areas for primary care to mitigate COVID-19 -- primary care's triple play. Below you will find the three essential focus areas and related links to guide your practice.

Vaccines

- Order COVID-19 vaccines on Thursdays between 8:00-4:00PM
- Outreach to patients to get them in for initial vaccines and bivalent booster dose appointments
 - Refer to the MDPCP Vaccine Booster Guide for further information on eligibility and other vaccine considerations
- Refer patients to a vaccinating site

Testing

- Order free Point-of-Care tests in order to quickly diagnose patients
 - Review the updated expiration dates of FDA-approved tests
- Consider PCR testing for asymptomatic patients
 - Review this webinar (beginning at 51:00) for PCR testing options
- Use this toolkit to guide testing protocols and communication

Therapeutics

- Prescribe oral antiviral agents such as Paxlovid to your eligible patient
 - Use this Federal Therapeutics Locator website to identify where you can refer eligible patients for oral antiviral agents
- Refer eligible and immunocompromised patients for Remdesivir
 - Use this Remdesivir referral form to refer patients
- Utilize the NIH prioritization guidelines

**With this triple play, we can
send COVID-19 to the dugout!**
