

In This Issue: eMIPP now integrated with CALiPHR

The Chesapeake Regional Information System for our Patients (CRISP) CQM Aligned Population Health Reporting (CALiPHR) tool is now integrated with eMIPP.

This integration allows eligible professionals (EPs) to report clinical quality measures (CQMs) to eMIPP electronically. Participants of the Medicaid Electronic Health Record Incentive Program now have a one-click electronic CQM reporting option in eMIPP, eliminating the burden of manually entering CQM numerators and denominators.

How to connect with CALiPHR:

1) Build an interface from your EHR to CRISP to electronically send consolidated-clinical document architecture (C-CDA) or quality reporting document architecture category I (QRDA-I) files to CRISP. CALiPHR's calculation engine utilizes this data to calculate various eCQMs and allows users to generate reports with aggregated and de-identified data that is submitted electronically to eMIPP via the CALiPHR interface; OR

2) Upload one or more QRDA-III files generated from your EHR to CALiPHR. Each QRDA-III report contains calculated summary data for one or more CQMs within your health system. A QRDA-III report is also used to electronically report for the Medicare EHR Incentive Program and Physician Quality Reporting System (PQRS) program. The data you upload will be submitted electronically to eMIPP via the CALiPHR interface.

What is a QRDA-III?

A Quality Reporting Document Architecture Category III (QRDA-III) file is an industry standardized document used for reporting aggregate clinical quality measure results. Each report contains data for one provider for one or more eCQMs.

Where do I obtain a QRDA-III?

It varies by EHR system. Many EHRs provide the reporting option in their clinical quality reporting module or other reporting modules. Please contact your EHR vendor for more information.

Additional benefits of integrating with CRISP:

- Electronically report and monitor CQM results at the individual provider and group level (through CALiPHR).
- Automatically submit electronic case reports to meet one of the [Meaningful Use Public Health Objectives](#).
- Auto-subscribe patients to the Encounter Notification Service (ENS) in lieu of creating monthly patient panels manually.

If you are interested in integrating with CRISP, please contact kai-yun.kao@crisphealth.org. To learn more about CRISP and services they provide to facilitate you and your providers delivering effective, quality care, please [click here](#).

Sign up now to upload your QRDA-III to CALiPHR and submit your attestation in eMIPP today.

*For both EPs and eligible hospitals (EHs), Maryland's deadline to submit a Medicaid EHR Incentive Program attestation for Program Year 2016 is **March 31, 2017**.*

For information about requirements for Program Year 2016, please visit the [CMS Meaningful Use website](#).
