

Prescriber Buprenorphine Comparison Report

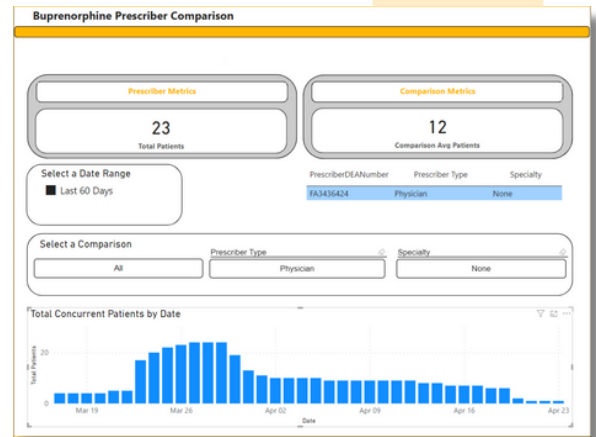

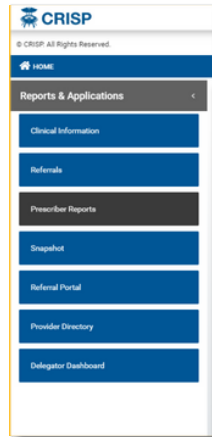

A new tool is available for prescribers. The **Buprenorphine Comparison Report** provides a summary of a prescriber's buprenorphine prescribing and allows comparison with other prescribers. This tool can be found at portal.crisphealth.org

TOOL CONTENT

This report is a summary of the past 60 days of PDMP dispense data for prescriptions written for formulations of buprenorphine that are approved by the FDA to be used to treat opioid use disorder (OUD).

With the elimination of the X-waiver requirement when prescribing buprenorphine for OUD, all prescribers with a valid DEA license are permitted to treat patients with OUD using buprenorphine.

Prescribers can view the number of patients for whom they prescribe buprenorphine compared to their peers as well as the number of patients over time.

LIMITATIONS

The specialty listed in this report is based on information that was provided upon registration for the PDMP and/or the specialty provided in the National Plan and Provider Enumeration System (NPPES). To change PDMP specialty, send an email to CRISP Support indicating your preferred Specialty: support@crisphealth.org or call 877-952-7477.

The PDMP collects data on CS medications that were dispensed in or into Maryland. Any prescriptions written but not filled or filled in other states would not be counted in the metrics. The data collected by the PDMP is dependent upon the accurate reporting by dispensers. The PDMP does not make changes to the data that we receive and any data corrections need to be made at the dispenser level.

Any buprenorphine that is dispensed from a program that is covered by 42 CFR Part 2 is not reported to the PDMP and will therefore not appear in this report.
