

Prescriber CRISP Tools Quick Guide

CRISP and the PDMP have developed several tools to help prescribers with the goal of increased patient care coordination and improved health outcomes in Maryland. All of the tools described below can be found at: portal.crisphealth.org

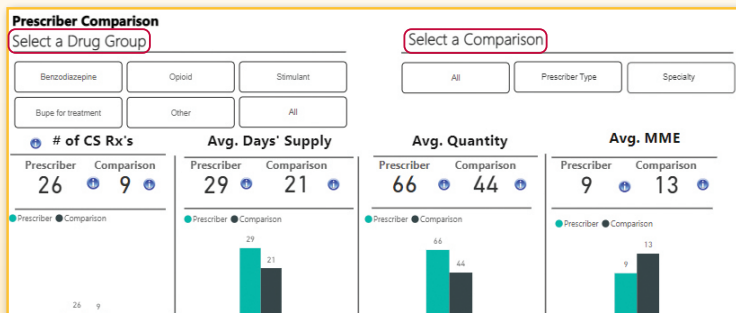

PERSONAL CONTROLLED SUBSTANCE (CS) PRESCRIBING HISTORY

This report displays the individual prescriber's CS prescriptions across all patients, allowing opportunity to view and understand personal prescribing trends. It can also be used as a tool to audit for potential fraud concerns, for example if there is concern that DEA credentials are compromised.

PRESCRIBER INSIGHTS

The Prescriber Insights tool consists of two components. At the top of Prescriber Insights are five metrics based on individual prescribing. The second tool allows prescribers to view their prescribing history in comparison to their peers.

UNSOLICITED REPORTING NOTIFICATIONS (URNS)

URNs are provided for educational and practice improvement purposes with the goal of supporting clinical decision-making and reducing the risk of adverse outcomes for patients receiving CS prescriptions. URNs may be mailed or emailed to prescribers and can be found in the portal seen below.
