Influenza Season (Oct-May): Follow Outbreak Prevention Recommendations (MDH Respiratory Guidelines pages 7-9)

- Do any staff or residents have respiratory illness?
  - Yes: Follow Case Management Recommendations (pages 9-11) for each case
  - No: Is there an outbreak (if >1 case)?
    - Yes: Follow Outbreak Management Recommendations (pages 11-14); call LHD immediately
    - No: Follow Case Management Recommendations (pages 9-11) for each case; consider calling LHD for additional recommendations

Case Definitions
1. Influenza-like illness (ILI): A respiratory illness with a temperature of 37.8°C (100°F) or greater orally PLUS cough or sore throat
2. Influenza: An illness with laboratory confirmation of influenza, regardless of signs or symptoms
3. Pneumonia: A clinically compatible illness PLUS a new x-ray finding of pneumonia or a NEW infiltrate that is not felt to be aspiration pneumonia

Outbreak Definitions
1. Influenza-like illness (ILI): 3 or more cases in residents or staff within 7 days
2. Influenza: 2 residents or staff having onsets of ILI or pneumonia within 3 days of each other and at least 1 person has influenza confirmed by any test
3. Pneumonia: 2 or more cases of pneumonia in a ward or unit within 7 days

An outbreak can be a combination of any of the above.
Outbreak Prevention (No Cases)

• Maintain an infection control program
• Monitor influenza activity
• Maintain a vaccination program for residents/patients and staff
• Promote respiratory hygiene/cough etiquette
• Encourage frequent hand hygiene

• Screen visitors for signs of illness
• Maintain environmental cleaning regimen
• Train employees in infection control and best practices for prevention/control of respiratory illness and outbreaks
• Track employee absences
• Enact flexible, non-punitive sick leave policies
Case Management (Outbreak Definition Not Met)

In addition to Outbreak Prevention Recommendations...

- Ill staff should stay home until fever-free for 24 hours without antipyretics
- Use standard and droplet precautions when caring for ill patients/residents
- Place symptomatic patients/residents in private rooms (on same unit)
- Patients/residents with respiratory illness should stay in their rooms
- Test for influenza and other pathogens as clinically appropriate
- Administer antiviral treatment and chemoprophylaxis when appropriate
- Discourage visitors to ill patients from visiting other rooms
- Provide instructions to visitors regarding hand hygiene and other prevention measures
- For pneumonia cases:
  - Perform appropriate diagnostic testing
  - Restrict to room until completion of first 48 hours of antibiotic therapy
  - Report cases if caused by organism listed in COMAR 10.06.01.03
  - If pneumonia caused by Streptococcus pneumoniae, attempt to vaccinate patients/residents who are unvaccinated

MD DHMH Respiratory Guidelines for Healthcare Settings (May 11, 2017) – Pages 9-11
Outbreak Management

In addition to Outbreak Prevention and Case Management Recommendations...

- Report outbreaks to your local health department immediately
- Notify all staff and residents of the outbreak
- Conduct daily active surveillance until at least 1 week after last case
- New admissions are not allowed during outbreaks in non-acute care settings
- Perform appropriate diagnostic testing
- Follow antiviral treatment and chemoprophylaxis recommendations
- Limit group activities and consider serving meals in patient rooms
- Limit traffic of patients and staff between units
- Start visitor precautions
- Administer influenza vaccine to unvaccinated patients and staff
- Enhanced hand hygiene
