Maryland Department of Health,
Youth Risk Behavior Survey, 2021-2022

Cecil County high school students who reported ever **having sex**

Maryland Department of Health,
Youth Risk Behavior Survey, 2021-2022

DID YOU KNOW?

- You can't tell if someone has a Sexually Transmitted Infection (STI) just by looking at them. Most STIs don't cause any symptoms, so the only way to know for sure is to **get tested**.
- You can prevent pregnancy and STIs by not having sex. If you do have sex (oral, anal or vaginal), use a condom every time to reduce the risk for STIs, including HIV, and to prevent pregnancy.

It's your health, you can **protect** it!

Talk to a health care provider or your local health department about confidential STI testing and treatment. Scan the QR code to find your local health department.
