*“Maryland Health kept me and babies healthy and happy. Thank you!”*

*“I am a nurse and my husband and I are very fortunate financially. I would like to see more support for WIC, free birth control, breastfeeding and father support.”*

*“I'm glad I decided to participate even though my husband and I lost our child. My hope is that while I grieve, I can still be a help to another mom in some way shape or form. Good luck with the program and hopefully one day I will be answering this survey about a new, healthy baby!”*

## **INTRODUCTION**

This report highlights data from births occurring to Maryland residents in 2017 collected through the Pregnancy Risk Assessment Monitoring System (PRAMS). PRAMS is a surveillance system established by the Centers for Disease Control and Prevention (CDC) in 1987 to obtain information about maternal behaviors and experiences that may be associated with adverse pregnancy outcomes. Data are collected by surveying women who have recently delivered live born infants.

PRAMS projects are conducted through cooperative agreements between the CDC and state health departments. PRAMS projects for 2017 births were underway in 48 states and New York City, representing 83% of all U.S. live births. All surveys include a core set of standardized questions, which allows for multi-state analyses. In addition, each state can add questions tailored to meet its needs. The core section of the survey includes questions relating to prenatal care, obstetric history, smoking, alcohol use, physical abuse, contraception, economic status, maternal stress, and infant health. The Maryland-specific section of the survey includes questions on maternal employment, pre-pregnancy health, co-sleeping and sleep environment, contraceptive use, depression, oral health, chronic disease, infections, and labor induction.

The PRAMS project in Maryland is a collaborative effort of the Maternal and Child Health Bureau (MCHB), the Vital Statistics Administration (VSA) of the Maryland Department of Health (MDH), and the CDC. Maryland began collecting PRAMS data from mothers who delivered in 2000.

## **METHODOLOGY**

### **Sampling and Data Collection**

Women eligible to participate in PRAMS are selected from Maryland's live birth certificate files and need to be Maryland residents who have delivered in the state. Each month, a stratified, random sample of approximately 200 live births is selected. The sample is stratified by infant birth weight (<2500 grams, ≥2500 grams). This sampling frame over-samples mothers who have delivered a low birth weight infant (<2500 grams).

PRAMS combines two modes of data collection; a survey conducted by mailed questionnaire with multiple follow-up attempts, and if mail is not successful, a survey conducted by telephone interview. Survey questionnaires and other materials are available in both English and Spanish.

The first mailing, which is done two to four months after delivery, is a letter that introduces PRAMS to the mother and informs her that a questionnaire will soon arrive. Within seven days of this letter, the questionnaire packet is mailed. This packet includes the 84-item main survey along with an informed consent page, calendar, and resource brochure. In addition, a manicure file is sent as an incentive for completing the survey. Seven to 10 days after the initial packet is mailed, a tickler that serves as a thank you and reminder note is sent. Mothers

who do not respond to the tickler within seven to 14 days are mailed a second questionnaire packet. A third questionnaire packet is mailed to all remaining nonrespondents seven to 14 days later. Telephone follow-up is initiated for all nonrespondents.

Data collected through PRAMS are linked to birth certificate data, which allows for the survey data to be weighted to reflect the total birth population. Sampling, nonresponse, and noncoverage adjustment factors are applied to the data in order to make the results generalizable to the state's population of women delivering live born infants during the study period. Further information on PRAMS methodology, including weighting procedures, may be found on the CDC website at <http://www.cdc.gov/prams/methodology.htm>.

### **Survey Response and Data Analysis**

The CDC recommends that states obtain a response rate of at least 55% for analysis of PRAMS 2017 births data. The weighted response rate among women delivering in Maryland between January 1, 2017 and December 31, 2017 was 57%. During this 12-month period, 1,060 mothers completed the PRAMS questionnaire with a weighted response reflecting 64,204 mothers. The weighted figure included 26,779 births to white non-Hispanic, 19,403 births to black non-Hispanic, 4,840 births to Asian, 10,854 births to Hispanic women, 74 births to American Indian, 2,123 Other/Mixed, and 131 Missing race/ethnicity. Survey findings in this report are shown by race/Hispanic origin (White Non-Hispanic, Black Non-Hispanic, Asian Non-Hispanic, and Hispanic), maternal age, and maternal years of education.

### **ACKNOWLEDGMENTS**

The Maryland PRAMS Project would like to acknowledge the CDC PRAMS Team for their technical assistance and support, especially Denise D'Angelo, MPH, and Ada Dieke, PhD, our project managers who have expertly guided and assisted our program. Additionally, our thanks go to the Maryland PRAMS Steering Committee for their invaluable input to many aspects of our project.

Most importantly, we very much appreciate the 1,060 mothers who took the time to complete the questionnaires that are represented in this report. Their answers will contribute greatly towards our continuing efforts to improve the health of Maryland mothers and babies.

# Maryland PRAMS Highlights--2017

## Preconception factors

- Forty-two percent of all live births were **unintended** (includes women who said they were 'not sure' how they felt about the pregnancy).
- Nineteen percent of women reported they were covered by **Medicaid or Health Choice** just before pregnancy and 17% were uninsured.
- According to their body mass index (BMI) just before pregnancy, 24% of mothers were **overweight** and 29% were **obese**.
- Thirty-five percent of women reported taking a **multivitamin daily** in the month before conception.
- Before pregnancy, 18% of women reported they had **anxiety** and 11% had **depression**.
- During the 3 months just before pregnancy, 11% of women **smoked**, 52% consumed **alcohol**, and 16% had at least one episode of **binge drinking**.
- In the 12 months before pregnancy, 36% of women had not had a **dental cleaning**.
- Sixty-five percent of mothers reported they had a **health care visit** with a doctor, nurse or other health care worker.

## Prenatal factors

- Eighty-four percent of mothers began **prenatal care** during the first trimester of pregnancy, and 2% began in the third trimester or received no care.
- Sixty-five percent of mothers reported that **HIV testing** was discussed during prenatal care visits; 41% reported getting an HIV test prenatally and 63% reported getting the test during pregnancy or delivery.
- Eleven percent of women had **gestational diabetes**.

- **Physical abuse** by a current husband/partner or ex-husband/partner during the 12 months before pregnancy was reported by 4% of mothers
- Five percent of women **smoked** during the last three months of pregnancy. Eight percent of women reported using **alcohol** and 0.3% of women reported a **binge-drinking** episode during the last three months of pregnancy.
- Sixty-three percent of women were vaccinated for **seasonal flu** during the 12 months before delivery or during pregnancy.
- Thirty-one percent of women used **Medicaid or Health Choice** for their prenatal care and 4% were **uninsured**.
- During pregnancy, 69% of women **worked at a job** for pay.
- Of the women who worked, sixty-three percent of them felt that the **amount of time they were able to take off** after the birth of their new baby was too little.

## Infant health and related factors

- Eighty-nine percent of infants were **breastfed** after delivery, and 77% were breastfed eight weeks or longer.
- In terms of **sleeping environment**, 83% of infants were usually placed on their backs to sleep and 58% always slept alone in their own crib or bed in the past 2 weeks.

## Maternal postpartum factors

- Twenty-one percent of mothers reported they were not using **postpartum contraception**.
- Seven percent of mothers **smoked postpartum**.
- Five percent of mothers reported feeling **down, depressed or hopeless** always or often since their new baby was born.

*“Not having paid leave in Maryland adds financial pressure to couples at a time where another stressor is not needed.”*

*“I had a great experience with the nurses at the hospital! Their childbearing/rearing and breastfeeding classes were also awesome!”*

*“I don’t feel like postpartum depression, or psychosis is discussed enough. It is a sensitive subject, yes, but for family planning and dismissal from the hospital. I feel like the subject should be gently discussed and give the family contact info in case of abnormal occurrences. Waiting until 6-7 weeks post- op visit is sometimes too long.”*

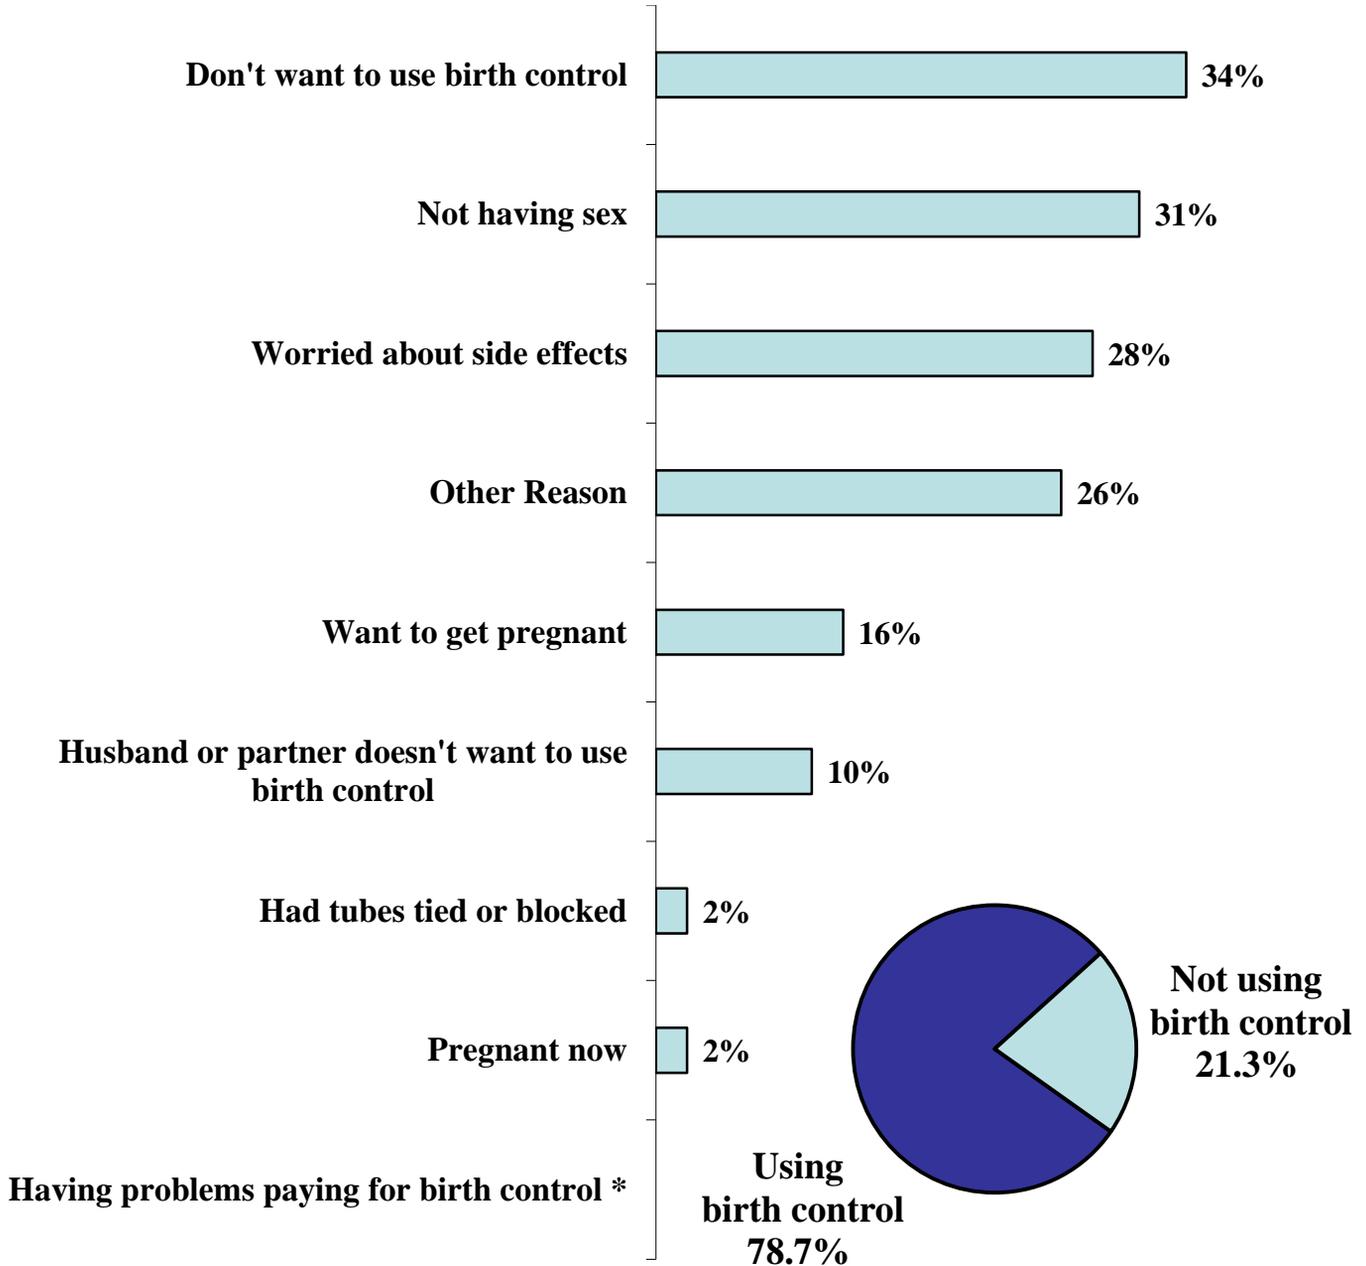

*“The amount of support I received at the hospital to breastfeed and bond immediately with baby was excellent. Support groups for new moms are so important.”*
