December 2018

Maryland Population Health Summit

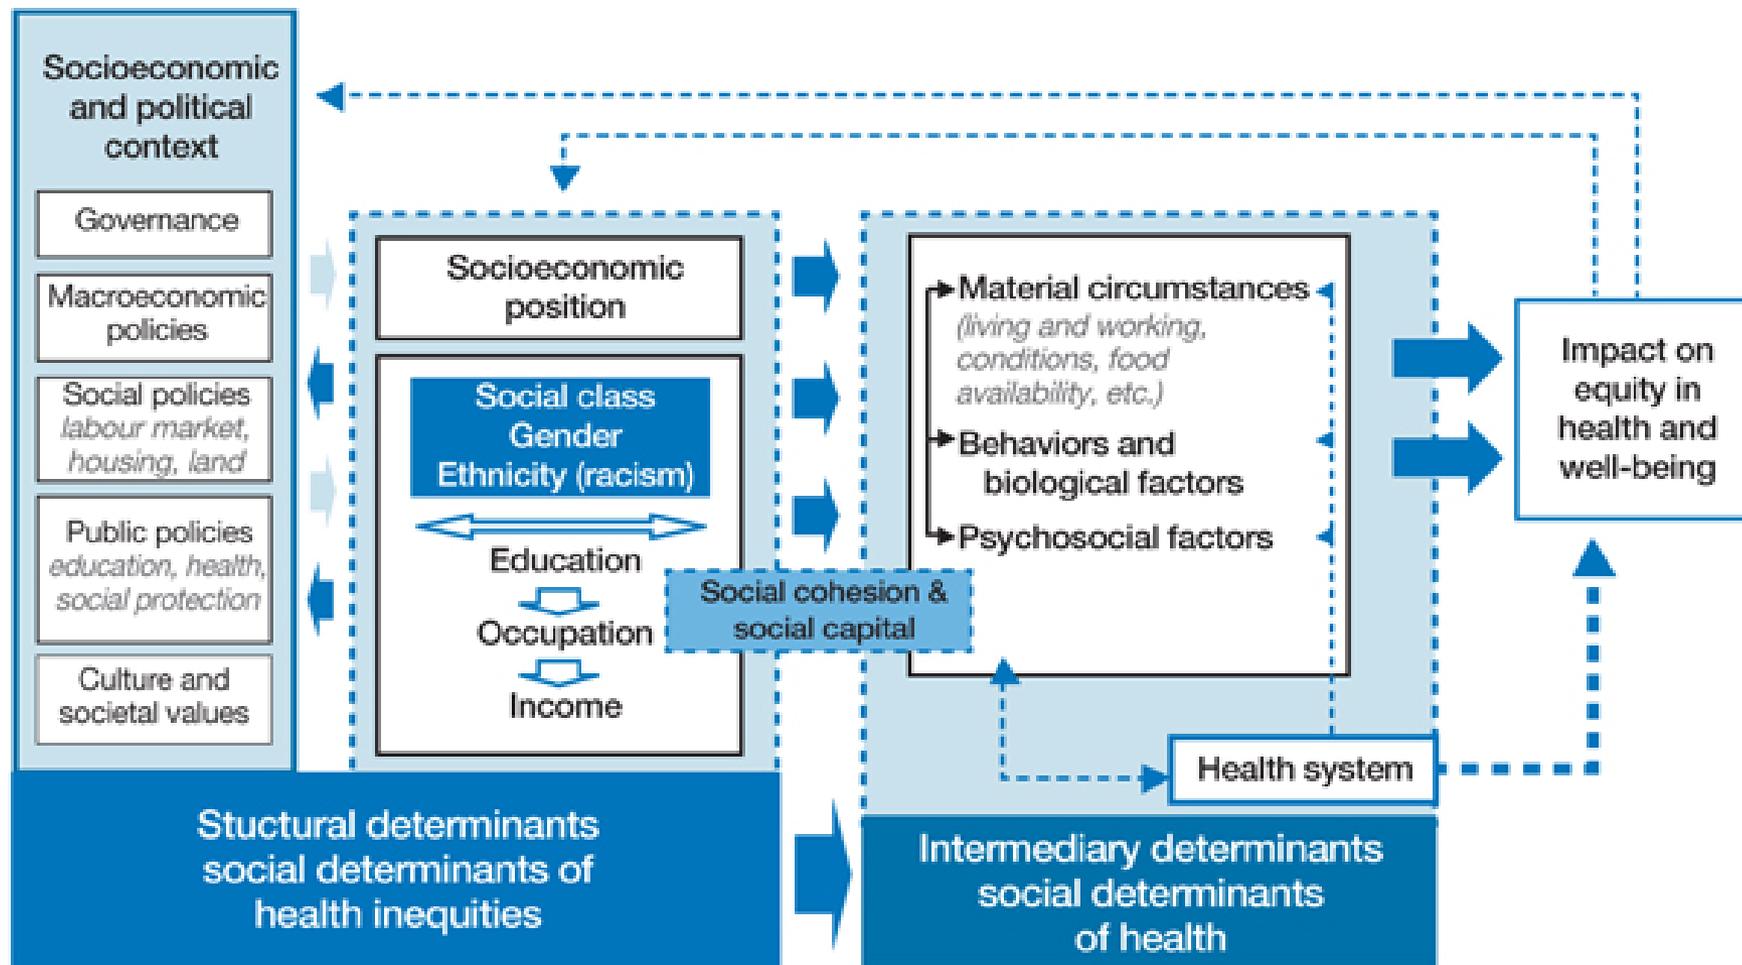

Population Health

(Kindig and Stoddard)

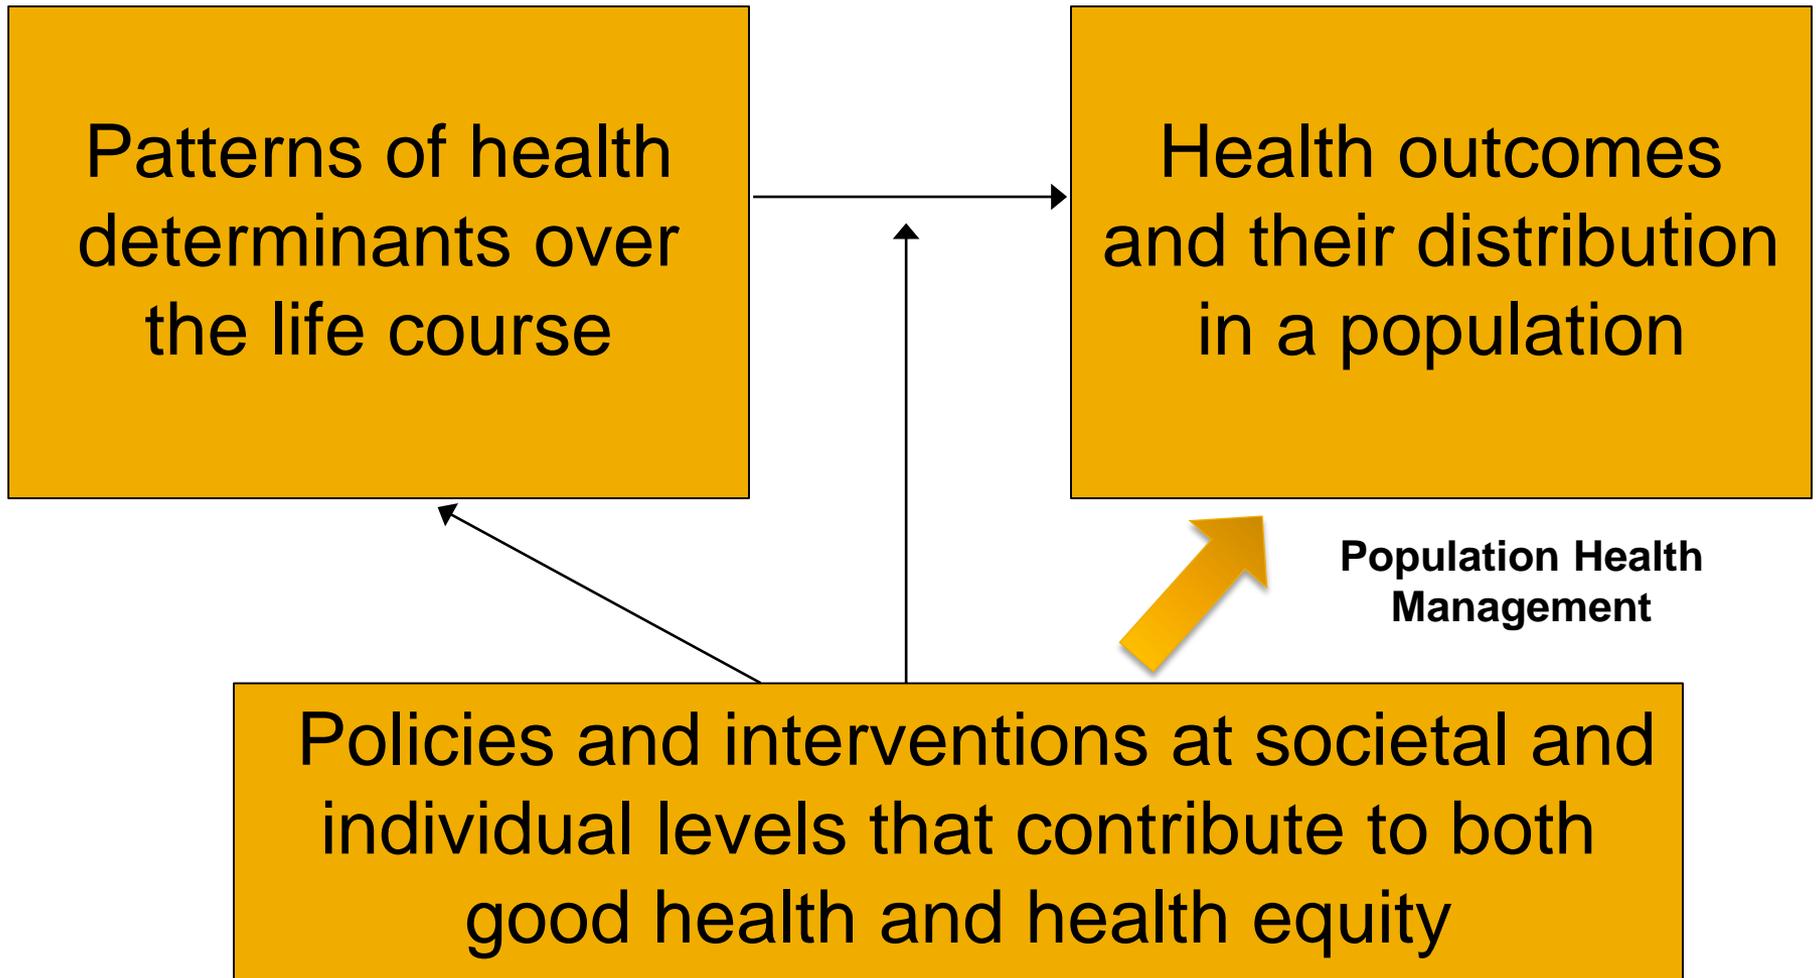

WHO Conceptual Framework of Social Determinants of Health

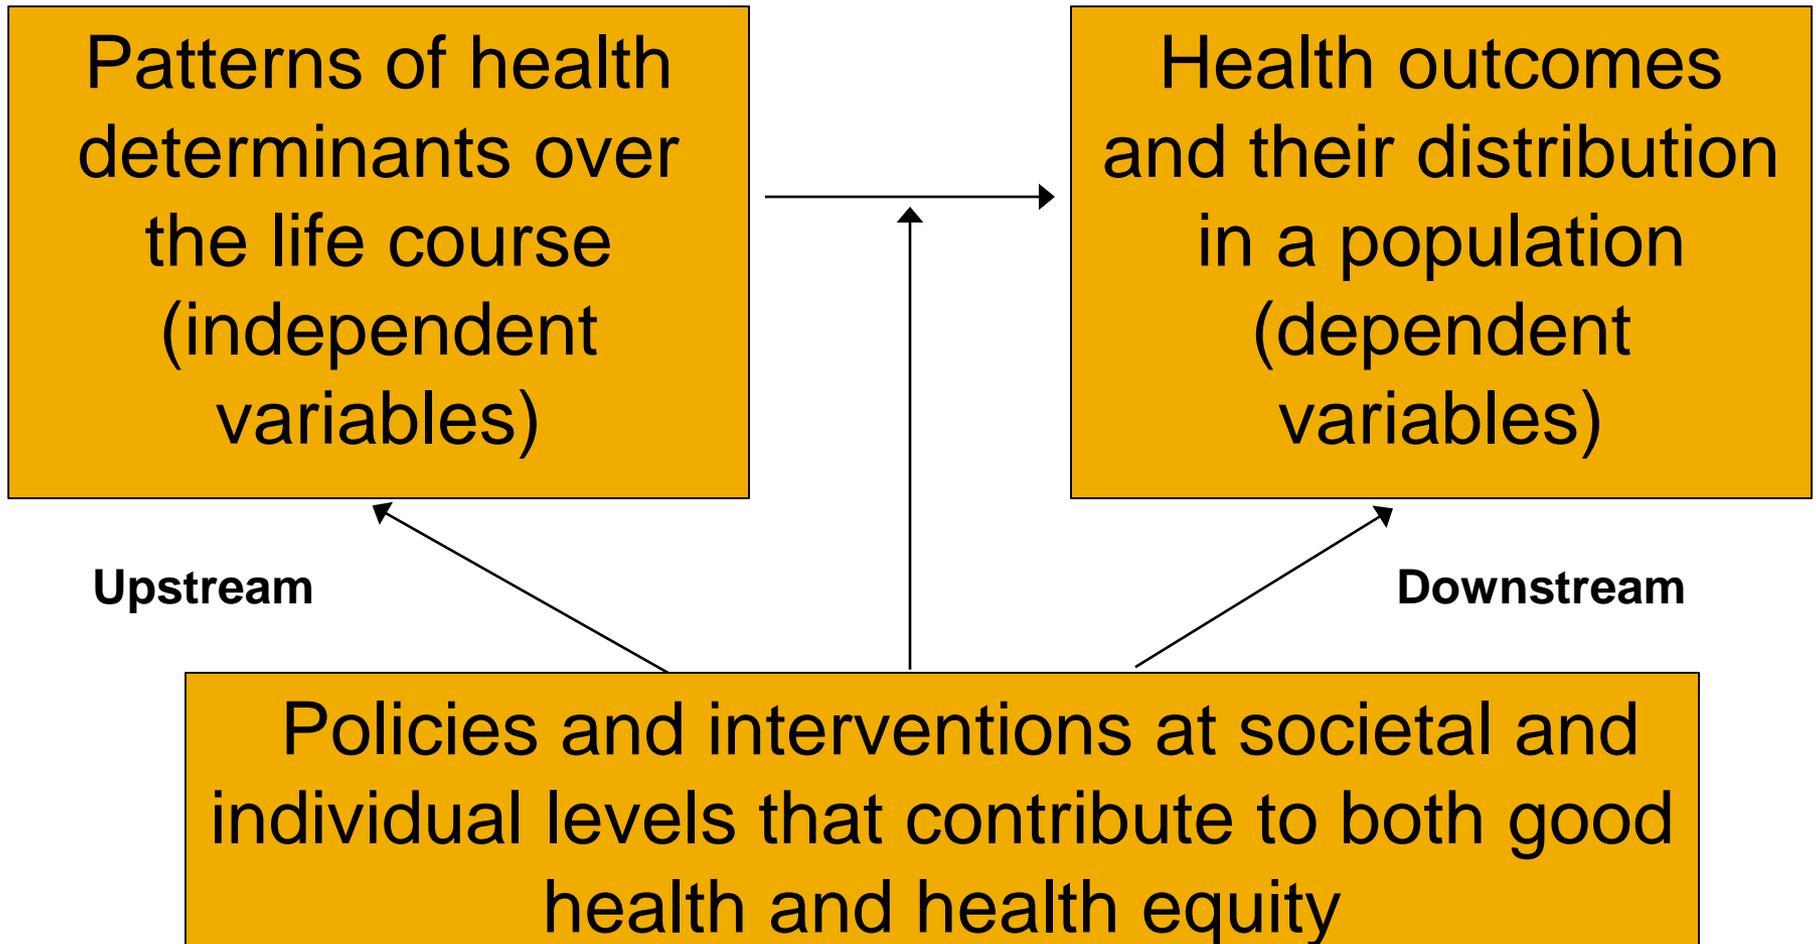

Conflation of a number of different fields of inquiry and practice

- **Population health**
- Public health
- Preventive medicine
- Population medicine
- **Population health management**
- Precision medicine
- Precision health/precision public health

Population Health

Population Health

Summary

- SDOH or health factors influence health more than clinical care.
 - The discussion of “population health management” has brought some new attention to SDOH and health equity.
- We need the right balance of upstream and downstream efforts to improve population health. Upstream efforts will have a greater influence.
 - Otherwise, as Sharfstein laments, “we may find ourselves awash in population health efforts, without meaningful progress in the health of our population.”

Thanks!
