Weekly Heat-related Illness Surveillance Report

June 21, 2017

Reporting for June 13, 2017 through June 19, 2017

National Weather Service Forecast: No hazardous heat forecast.
Heat Advisories Declared During the Previous Week: 0
Total Heat Advisories Declared This Year: 0

Heat Indexes are calculated for temperatures above 80°F with humidity of 43% or greater.

Emergency Department Chief Complaints Regarding Heat-related Illness

Date	Number of Chief Complaints Regarding Heat-related Illnesses State of Maryland
June 13	84
June 14	56
June 15	46
June 16	41
June 17	26
June 18	28
June 19	10

ESSENCE chief complaint query contains the following terms: hyperthermia, heat, dehydration and sunburn

There were no chief complaint clusters identified during the week.

Geographical and Age Group Distribution of Emergency Department Chief Complaints Regarding Heat-related Illnesses for June 13 through June 19, 2017

*Geographical distribution of emergency department chief complaints is based on patients' jurisdictions of residence. The "Other Region" category includes patient records without a ZIP code and patients who reside outside of Maryland.

Total Number of Heat-related Deaths	Jurisdiction*	Age Group	Gender
1	Anne Arundel	65+	Female

* Refers to the jurisdiction where the heat-related death occurred.

There was one heat-related death reported this week.

There has been one heat-related death during our reporting period this summer.

This death is not suspected or presumed a homeless individual.

For media inquiries, please contact the Office of Communications: [410-767-6490](tel:410-767-6490)

Heat Advisory criteria: The National Weather Service will issue a Heat Advisory when the heat index value is expected to reach 105 to 109 degrees within the next 12 to 24 hours. A Heat Advisory may be issued for lower criteria if it is early in the season or during a multiday heat wave. NWS will issue an Excessive Heat Warning when the heat index value is expected to reach or exceed 110 degrees within the next 12 to 24 hours. An Excessive Heat Warning may be issued for lower criteria if it is early in the season or during a multiday heat wave.

Emergency Department Data: The results from the query used in ESSENCE, an electronic biosurveillance system, to track heat-related illnesses may be an overestimation of the actual burden of illness related to the hot weather. This overestimation is due to the nature of the query, which includes the term dehydration, a condition that may be caused by factors other than heat.

Emergency Medical Services (EMS) Data: These data are based on EMS pre-hospital care reports where the EMS provider has selected “Heat Exhaustion/Heat Stroke” and/or “Hyperthermia” as a primary or secondary impression a patient’s illness. This impression is solely based on the signs and symptoms seen by the provider, not on any diagnostic tests. Since these numbers do not include all primary or secondary impressions that may be seen with heat exposure the actual numbers may be low. These data are reported for trending purposes only.

Suspected Homeless Death Data: Office of the Chief Medical Examiner (OCME) Field Investigators use the U.S. Department of Health and Human Services (HHS) [homeless definition](#) to determine suspected homeless deaths. Homeless deaths are listed as suspected due to the limited information available to the Field Investigators at the time of investigation, which may result in some misclassifications.
