

Unintentional Drug- and Alcohol-Related Intoxication Deaths in Maryland, 2022

Preliminary data update through 2nd quarter: January – June

Release Date: September 2023

This report contains counts of unintentional drug- and alcohol-related intoxication deaths* occurring in Maryland through the 2nd quarter of 2022. Counts are also shown for the same period of 2009-2021 to allow for review of trends over time. Counts for 2022 are not complete and are subject to change.

Since an intoxication death may involve more than one substance, counts of deaths related to specific substances do not sum to the total number of deaths.

*Deaths resulting from recent ingestion or exposure to alcohol or other types of drugs, including heroin, prescription opioids, prescribed and illicit forms of fentanyl (including carfentanil), cocaine, benzodiazepines, phencyclidine (PCP), methamphetamines and other prescribed and unprescribed drugs.

The services and facilities of the Maryland Department of Health (MDH) are operated on a non-discriminatory basis. This policy prohibits discrimination on the basis of race, color, sex, or national origin and applies to the provisions of employment and granting of advantages, privileges, and accommodations. The Department, in compliance with the Americans With Disabilities Act, ensures that qualified individuals with disabilities are given an opportunity to participate in and benefit from MDH services, programs, benefits, and employment opportunities.
