CRISP-facilitated data

CRISP provided data summary

- Standard data
  - Panel-based hospitalization outputs (update!)
  - CRISP will not be providing any other standard measure data
- Custom/ad-hoc measures
  - In development
- To enable standard data report, grantees MUST submit panels

Standard panel data provided by CRISP

- CRISP is expanding the list of standard hospital measures that we will provide to grantees beyond those available in pre/post
- Because of that change, grantees do NOT need to use Pre/Post report to report the existing standard panel-measures (IP Pre, IP Post, ED Pre, ED Post)
- Standard panel-based measure list is expected to include the following measures at 1 month, 3 month, 6 month, and 12 month analysis levels:
  - Total charges and visits pre and post enrollment for IP
  - Total charges and visits pre and post enrollment for ED
  - Potentially Avoidable Utilization (PAU) charges and visits pre and post enrollment (IP)
- Data will be provided at minimum twice a year (most likely excel format) to respective grantees and CHRC
- Cell sizes less than 11 will be suppressed

Custom/ad-hoc measures

- Grantees requested both panel and geographic based measures
- For panel-based pre/post measures, CRISP also anticipates providing the total charges and visits for the following criteria:
  - Visits for Diabetes
  - Visits for Hypertension
  - Visits for Heart Disease
  - SUD Visits (ED only)
  - Mental Health Visits
  - Specifications for these visits are still under review
- Important limitations:
  - Reporting for inpatient visits for SUD is suppressed under 42 CFR Part 2
  - Non-standard definitions
  - Cell sizes will be suppressed with less than 11
- For geographic measures, CRISP is working on enabling, but may need follow-up specification conversations (JHMI, PG, Baltimore Healthy Start)

Panel Submission

- To enable standard and custom data reporting, grantees must upload ENS Panels + program panels to CRISP every 90 days (ideal is 30)

- Once more grantees have hired data analysts, we will provide a session on uploading panels / programs
