Indicators that cannot be calculated using data sources currently available for Maryland

Measuring Progress

The indicators are considered on target to meet the goal if the projected value for 2025 is within the bounds of the 95 percent confidence interval of the NHAS goal. If the value for the most recent year moves towards the target, the indicator is considered in progress towards the NHAS goal.

Important Definitions

PrEP	Pre-Exposure Prophylaxis.
Linkage to Care	Reported CD4 or viral load test performed less than or equal to 1 month after their initial HIV diagnosis.
Viral Suppression	Recent viral load measured in the specified year of less than 200 copies per milliliter.
Knowledge of Status	An individual's awareness of their HIV status.
LGBTQIA+	Lesbian, Gay, Bisexual, Transgender, Queer or Questioning, Intersex, Asexual and more.
LGBTQIA+ Supportive Policies	(1) having a Gay/Straight Alliance (GSA) or similar club, (2) identifying safe spaces, (3) prohibiting harassment based on sexual orientation or gender identity, (4) encouraging staff to attend professional development; (5) facilitating access to out-of-school health service providers, (6) facilitating access to out of school social and psychological service providers, and (7) providing LGBTQIA+-relevant curricula or supplementary materials.
MMSC	Male-to-Male Sexual Contact.
IDU	Injection Drug Use.
