Myth vs Facts

It's time to break down the myths about colon cancer and the screening process. Share the attached "Myth vs Facts" graphics via email, on social media, or use them on your website or blog so your readers are accurately informed. Right-click on an image to save.

COLON CANCER IS A "MEN'S DISEASE."

MYTH! The American Cancer Society estimated that about 69,000 women and 77,000 men would be diagnosed with colon cancer in the United States.* Let's get everyone screened!

COLON CANCER OFTEN HAS NO OBVIOUS SIGNS OR SYMPTOMS.

FACT! Regular screening is the key to early detection because, in many cases, by the time symptoms appear, the cancer may have already advanced to a later stage.

"I'M TOO YOUNG TO GET SCREENED."

MYTH! If you have a family history of colon or rectal cancer, you should begin screening before you're 50 years old.*
